

Icicle Peshastin Irrigation District Intake – upstream of Snow Creek (Where Snow/Nada Lake water enters Icicle Creek)

LNFH Intake on Icicle Creek – Overflow, sediment settling, canal into Intake House below

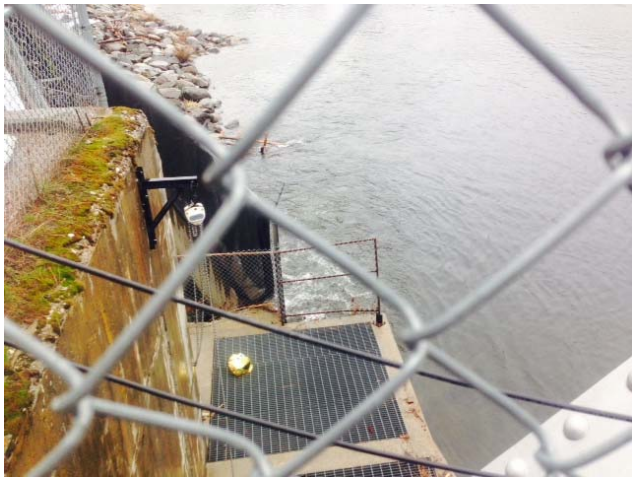

Intake on Icicle Creek – pumped from house in this picture to the Hatchery downstream

Sand Settling Basin on the LNFH Property, to drop much of the sediment from Icicle Creek so it doesn't impede Hatchery operations

Influent from Sand Settling Basin pumped to two locations (on a Y diversion)

Outfall 001 – Fish Released to Icicle Creek at the end of the raceways and holding ponds

Structure 2 –upstream of the Hatchery – gate stays open to leave water in Historical Channel of Icicle Creek – not running water over the Hatchery Channel

Pollution Abatement Pond (one of two identical ponds)

Outfall 002, water discharged from the pollution abatement ponds

On Icicle Creek at Outfall 002, looking upstream towards the Hatchery and Outfall 001. Tribal fishing platform on the right side of Icicle Creek, downstream from Outfall 001
